

LAUNCHING OF ENLARGED HYPER OMEGA

GO FOR VALUE : OPTIMISING DESIGN, PERFORMANCE AND COST

HOM-1600H and HOM-1450H

Efficiency in performance; high in energy absorption and low in reaction load
 Economical in design catering to today's needs for large and new generation of container ships, liquid and bulk carrier

Application Engineering

SRI Hybrid has over 40 years of expertise in delivering superiority in fender system
 Ability to propose the most suitable and cost effective fender system in tandem with engineering demands

Best Quality from Factory in Japan

Invested in quality with new technology production facility in Kakogawa factory in 2007
 Production and quality control system that satisfy PIANC2002 requirements

Principal Dimensions

Performance Characteristics
